

Safety Zone--Safety Zone--Safety Zone--Safety Zone--Safety Zone--Safety

## About Us

**Future Fire Technologies, Inc.** is a computer software development company. We were founded in 1999 and are headquartered in Las Vegas, NV... our main goal is to find a way of helping our Fire Departments in protecting people and everything that brings meaning to their lives, using the best technology we can find. **Future Fire Technologies, Inc.** wishes to provide the public with an added safety precaution, "**You can never be too safe or too prepared**". We would like to introduce you to the "**Newest Fire Protection Software**" on the market and tell you how it will aid you, the Fire Department in making your job more successful. The name of our software is **ResQPlan**.

## Why is ResQPlan Important?

Every year numbers of children die from smoke inhalation or direct exposure to fire. In a dangerous situation it's seconds that matter, not minutes.

By advanced knowledge of where the gas/electrical shutoff switches are, the fire fighter could help in preventing an explosion or even kill the fire in its earliest form by knowing the floor plan of the building ahead of time. This can help the fire fighter in stopping the fire before it causes major damage. Because they have this knowledge ahead of time, they won't be relying on "*gut instinct*" that could help spread the fire.

## What is ResQPlan?

**ResQPlan** is just what we said before a "**Fire Protection Software**", that will let fire fighters know where they can find important devices, like the Gas or Electrical shut-off switches. It will show you where the occupants of the household usually are, and where their bedrooms are located. It will let you know where the younger occupants, (mainly children or pets), favorite hiding places are in case of an emergency. **ResQPlan** will list all important information that will give the fire fighters better knowledge of what they are up against. This gets them one step closer in fighting a fire and winning.

## How Can We Accomplish This?

Well, first we supply this program to the public. In order, to better understand the software, they will be guided through a brief tutorial that we have provided for them in order to complete **ResQPlan**. Once they have done this, they must submit the information to us via fax. Our team of "**safety specialists**" will then transfer their information to our main server, and we finally upload all the facts to the Fire Department in their correct area using the same emergency mapping system that these departments use. Making it easier to find the correct information. When a fire is called in, the department then punches into their computer the code for that area, a copy of directions to the victim's home and a layout of their floor plan with the appropriate information will printout. "**The Fire Fighter is now even more ready to fight the fire and win.**"

# ResQPlan

## How Do You Take Advantage of This Program?

Start by visiting our website at

**[www.ResQPlan.com](http://www.ResQPlan.com)**.

Here you will be able to begin the process of supplying us with your information so that we can archive it to our servers.

If you do not have access to the web then you can call us at

**1-877-ResQPlan.**

There our associates will begin the process with you.

We are here to help you.

*“Bringing the Fire Fighter  
One Step Closer to winning  
the fight against the fire.”*
