

FAQ's

How customizable is the Virtual Charting system?

Completely customizable! The engine of the software remains the same; however we alter the look and feel of your existing forms and methods of interaction with each patient.

Is it really a paperless system?

Yes. After all of your files have been scanned into the system there is no longer a need to maintain the paper records. All digital records are backed-up to devices that are stored in a HIPAA Compliant fire safe. In the unfortunate event of a fire, the integrity of your patient's records stays fully maintained and is just a restore away.

What if our office has more than one location?

Virtual Charting's core engine was created to handle just that situation! With remote access systems built into our software, keeping in touch with the main office from a remote location is easy and seamless. All that is required is a high-speed Internet connection. You will be able to access your patients' data as easily and as quickly as if you were still at the main office.

What happens when a doctor goes to see patients at the hospital?

Since, in this very common situation, and there is likely no feasible Internet connection, Virtual Charting has added a feature that will allow any authorized employee to pre-load patient files for a non-internet, remote access solution. Once the doctor returns to the office the tablet is automatically synchronized to the main servers. Thus creating accurate and complete files. We know that every doctor has his own method of charting a patient, not to mention the flexibility of rounds at a hospital. We have accounted for just that. Another superior quality of the Virtual Charting system is that it allows the doctor to add real-time notes to any pre-loaded patient account, while at the same time providing the ability to easily review the entire patients file. Outstanding to say the least! ■

PAPERLESS & WIRELESS

PAPERLESS

Imagine!
All the paper charts in your office, all the file folders, the copies, the clutter, all GONE!

WIRELESS

Believe!
Patient information is kept digitally, ready for retrieval at the click of a button!

SECURITY

Privacy!
All your patient PHI is encrypted and stored on Windows® 2003 dot NET Servers. All transmission over the wireless network to the Tablet PC's is WEP encrypted security.

TECHNOLOGY

Advanced!
From dotNET 2003 Servers to Windows® XP Micro ATX Form Factor Workstations to TFT Flat Screen Monitors and the latest in wireless technology.

SUMMARY

Virtual Charting is the first **“truly paperless”** medical office solution designed for doctors, nurses, and Office Staff. Your patients will appreciate the advancements and the speed of their office visit.

Virtual Charting reigns supreme at the forefront of medical technology. We offer a Completely Custom Solution, tailor-made to fit your office. With over twenty-one years of combined programming experience, we have the capability to design a product to fit your needs; this is NOT cookie cutter software.

No lost work time learning new software or the obvious hassles of teaching a system your voice or handwriting. Even those doctors that are “technologically challenged” can enjoy the ease

and simplicity of a truly mobile and paperless environment.

Your paperless medical office would now have full, real-time access to all of your digital patient files securely through a **Wireless Tablet PC (Virtual Chart)**. Even your patients would get to use these State-of-the-Art Virtual Charts for check-in purposes.

Patients could also digitally sign any claim forms by merely writing on the tablet.

From the Completely Customizable software, to hardware, to security and installation, Virtual Charting offers a complete, turn-key solution.
